connectors holders

Customizable
probe holders

Your Comfort with a Touch

Simplicity

Whenever physicians think of a high-level ultrasound systems, they ask for up-to-date platforms, with high-performance and advanced on-board technologies as well as simplicity and ease of use.

MyLab™Class C has been designed based on these key concepts in order to deliver a reliable diagnosis and to ensure every day productivity.

With just one glance you will understand how MyLab™Class C's simplicity has never been seen before on such a high level ultrasound scanner.

Ergonomics

High performance does not always mean large and stationary systems. A particular effort has been made in order to reduce size and to increase the new MyLab™Class C's ergonomics.

This has led to a compact and agile system, which is easy to move and is able to adapt to any kind of environment, including most critical ones such as interventional and the operating rooms. The height-adjustable and rotating keyboard, as well as the multiplane-articulated monitor arm, allow for optimal positioning at all times.

Opti-Light

Optimal lighting has always been a crucial factor for ultrasound imaging. The latest Widescreen LCD Monitor Technology allows images to be clearly displayed under any condition. MyLabTMClass C also introduces an additional unique feature: Opti-Light.

This feature, thanks to a light point behind the monitor, allows the operator to control the room's lighting level directly from the system, through the especially designed controls located on the touch screen. Optimized working conditions, better users' comfort and improved patient care.

Multifunction
Touch Screen

Easy
Control panel

Keyboard rotation and
height adjustment

Touch Screen

The large high-quality touch screen is well positioned near the most important working area of the control panel. This touch-screen allows all mode-dependent parameters to be clearly displayed and changed with one simple touch.

Completeness with a Touch

Capable

Comfortable

iQ Probes

The primary component in the signal processing chain leading to the final ultrasound diagnostic image is the transducer. The technology and the material's design employed to manufacture an ultrasound transducer are the key factors in determining the system's image quality. iQProbe represents Esaote's state-of-the-art technology designed to improve performance and ergonomics, iQProbe Technology is based on:

- Innovative Active Matrix Composite Material
- Multiple Adaptive Layers Solution
- Structure Filling Material manufacturing process
- Intelligent Geometric Lens Manufacturing Process

CnTI™

CnTI™ (Contrast Tuned Imaging) Esaote's revolutionary technology, in combination with latest generation ultrasound contrast agents, provides impressive clinical results due to precise micro-bubble detection. The very low acoustic pressure applied, allows the bubbles life time to be increased, for a clear identification of arterial and late phase. The very high probes sensitivity and the low level of noise and artefacts bring to precise diagnosis, both for lesions detection and characterization. A contrast-dedicated quantification tool is also available.

HD CFM and XFlow

Color Doppler sensitivity and resolution are very important in the assessment of blood flows, specially for those flows with limited dimensions and velocities.

HD CFM technology helps the user to define the right setting to obtain the maximum clinical information.

In case of particular diagnostic processes in which morphological information are more important than the hemodynamic itself, XFlow delivers clear pictures with reduced artefacts, and less-important insonation angle dependence.

Comprehensive

MyLabTMClass C

Connected

High Frequency Image

Esaote historical leadership in High-frequency Imaging deliver unexpected level of details in any application in which superficial images are required. 22 MHz transducers, XView, MView, ElaXto and X4D, as well as "A Universe under the mm" package are just few examples of the technological potential of the MyLabTMClass C. The clinical results are simply astonishing, open new research fields and new levels of diagnosis.

Advanced technologies such as ElaXto and X4D are implemented not just as additional qualitative information, but as important quantitative package to deliver objective and fast diagnosis.

X4D Technology

The advanced 3D/4D package takes advantage of innovative ways of visualizing conventional 2D ultrasound images through sophisticated algorithms and is able to deliver outstanding 3D/4D volume reconstructions. Measurements of length, surface, perimeter, diameter and angle as well as volume areas in the multi-dimensional display allow to provide both quantitative analysis and qualitative acquisition, with the link to a special database to file all personal data sets.

RFQIMT_QAS

RFQAS (Quality Arterial Stiffness) together with RFQIMT (Quality Intima Media Thickness) are part of the exclusive Esaote Advanced Vascular Package, based on the Esaote RF-data technology.

These two advanced technologies have a fundamental role in the Esaote "Prevention and Quantification" program, with the target of early detection of atherosclerosis and cardiovascular disease (CVD).

Accuracy, ease of use, real time immediate feedback, report and graphs allow physicians to easily evaluate possible consequence that any disease or treatment might have on the vascular system.

Integration with a Touch

Data management is very important today, both for users' comfort and patient care. Esaote offers an efficient solution for any need and any environment, ranging from stand alone workstation up to complex modular architectures. MyLabTMClass C wireless ultrasound allow also to be wireless connected to improve data sharing, integration and efficiency.

MyLabTMDesk

A flexible way to connect your MyLabTM to the PC, easily!

MyLabTMDesk is Esaote's answer to its user's need for a simple and straightforward way to archive, review, post-process, report or print their MyLabTM examinations on a PC from the comfort of their (home) office or while travelling. MyLabTMDesk provides the means to increase workflow and productivity in private offices, as well as in clinics and hospital departments.

- **Archive**, review and post-process examinations performed with the MyLabTM ultrasound systems.
- **Import** Esaote native file formats (UAF and EAF raw data) via USB, CD/DVD and network.
- **Perform** general and application-specific measurements.
- **Review**, change and print the examinations (reports and images).
- **Export** data using PC's standard features, i.e. burn on a CD/DVD, email, etc.
